Education

Rochester Institute of Technology - Rochester, NY B.S. in Artificial Intelligence, Expected May 2030 (First-year student)

Projects

ASL Fingerspelling Recognizer & Learning Tool - Personal Project | github.com/Crazycatz67/asl-recognizer

A browser web app that reads ASL fingerspelling (A-Z) in real time from a webcam. Inspired by a moment I couldn't communicate with a deaf man in line at a campus event.

- Built a labeled dataset of 10,000+ hand-sign images from Kaggle and other open sources.
- Built the recognition pipeline with MediaPipe for hand tracking and a custom classifier, running fully in the browser with no server.
- Wrote extra logic for the hardest letters: the easily confused ones (M/N, D/O/C) and the moving letters J and Z that need motion tracking.
- Added practice and challenge modes plus a Spell mode that voices signed letters into words. Taught myself the whole stack using Claude Code.

Interactive 3D Hologram Workshop - Personal Project | github.com/Crazycatz67/hologram-workshop

A browser demo that renders a real object, scanned with LiDAR, as a 3D hologram you control with hand gestures. Inspired by the interfaces in Iron Man.

- Scanned a physical object with LiDAR and rendered it in the browser with Three.js.
- Added webcam hand-gesture control to rotate, scale, and measure the object live.

Skills

Languages: Python, JavaScript, HTML, C++, C#
Tools & Libraries: Claude Code, MediaPipe, Three.js, Git, 3D printing and modeling
Approach: Self-taught in AI-assisted software development, learned to code and use AI tools from the ground up by designing and building real projects.

Experience

Independent AI-Assisted Development - Self-Directed

Taught myself software development and AI tools on my own, with no formal instruction. Designed, built, and tested two working web apps over weekends during my first month of college, learning each technology as I went.

3D Printing & AI Workflow Internship - Remote

Remote internship working with 3D printing and learning to use AI tools efficiently.

Harkness Independent Study - High School (Grades 11–12)

Built websites and games through a self-directed Harkness learning program, working in HTML, JavaScript, Python, C++, and C#.
